

Model Driven Solutions
Where Business Meets Technology

SysML v2: The New Standard for Model-Based Systems Engineering

*Presented to ModProd 2023
7 February 2023*

Systems Modeling Language™ (SysML®)

Supports the specification, analysis, design, and verification and validation of complex systems that may include hardware, software, information, processes, personnel, and facilities

SysML v1.0 adopted in 2006

Standard profile of UML v2.1

Current version is SysML v1.7
v1.7 expected to be last for SysML v1

SysML v2 RFPs issue

Language: December 2017

API and Services: June 2018

SysML v2 Submission Team (SST)

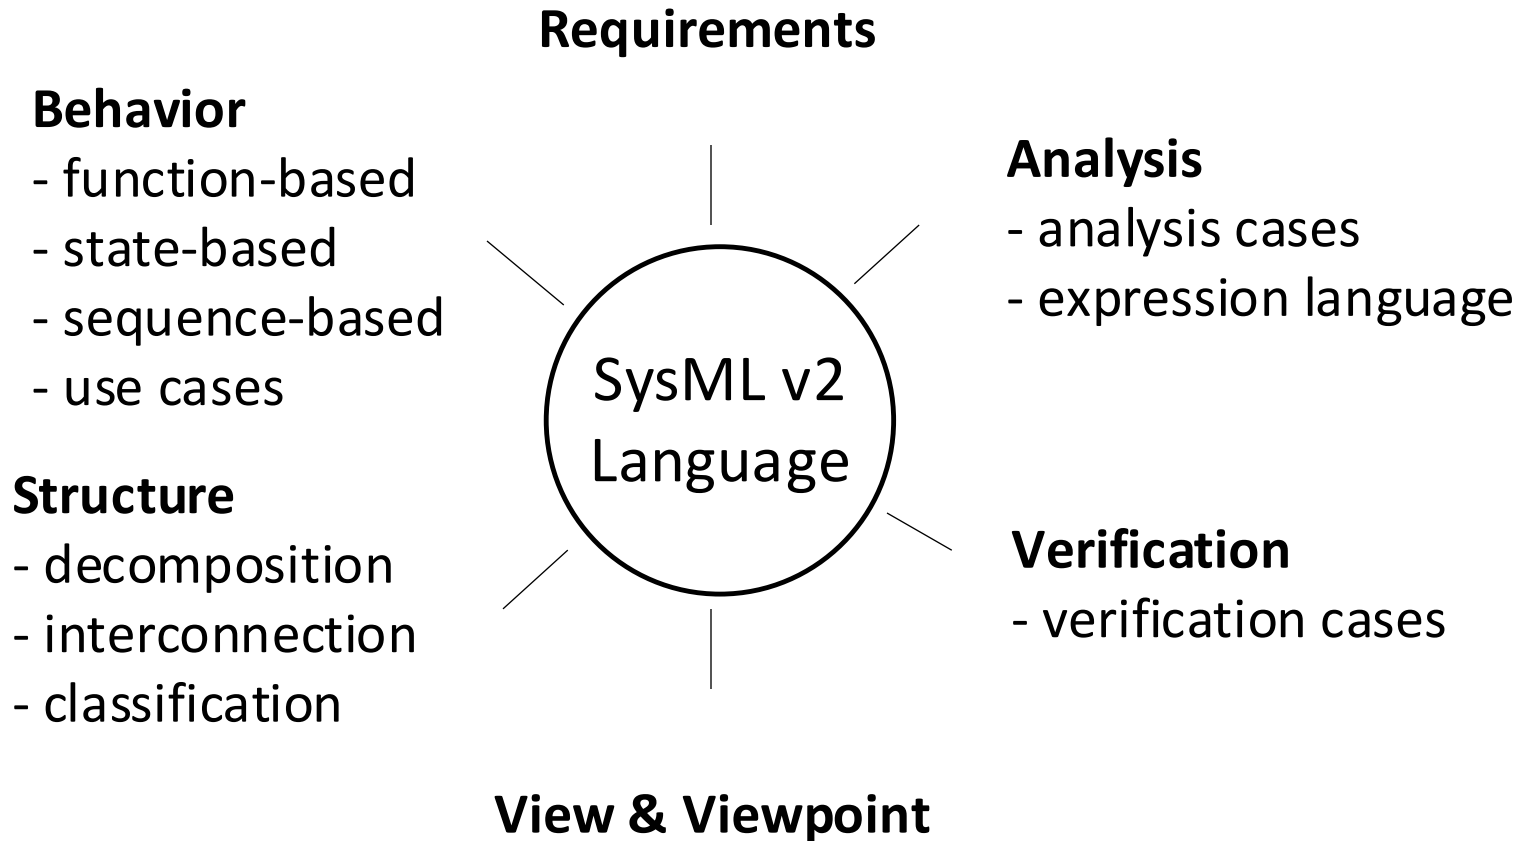

Formed December 2017

Leads: Sandy Friedenthal, Ed Seidewitz

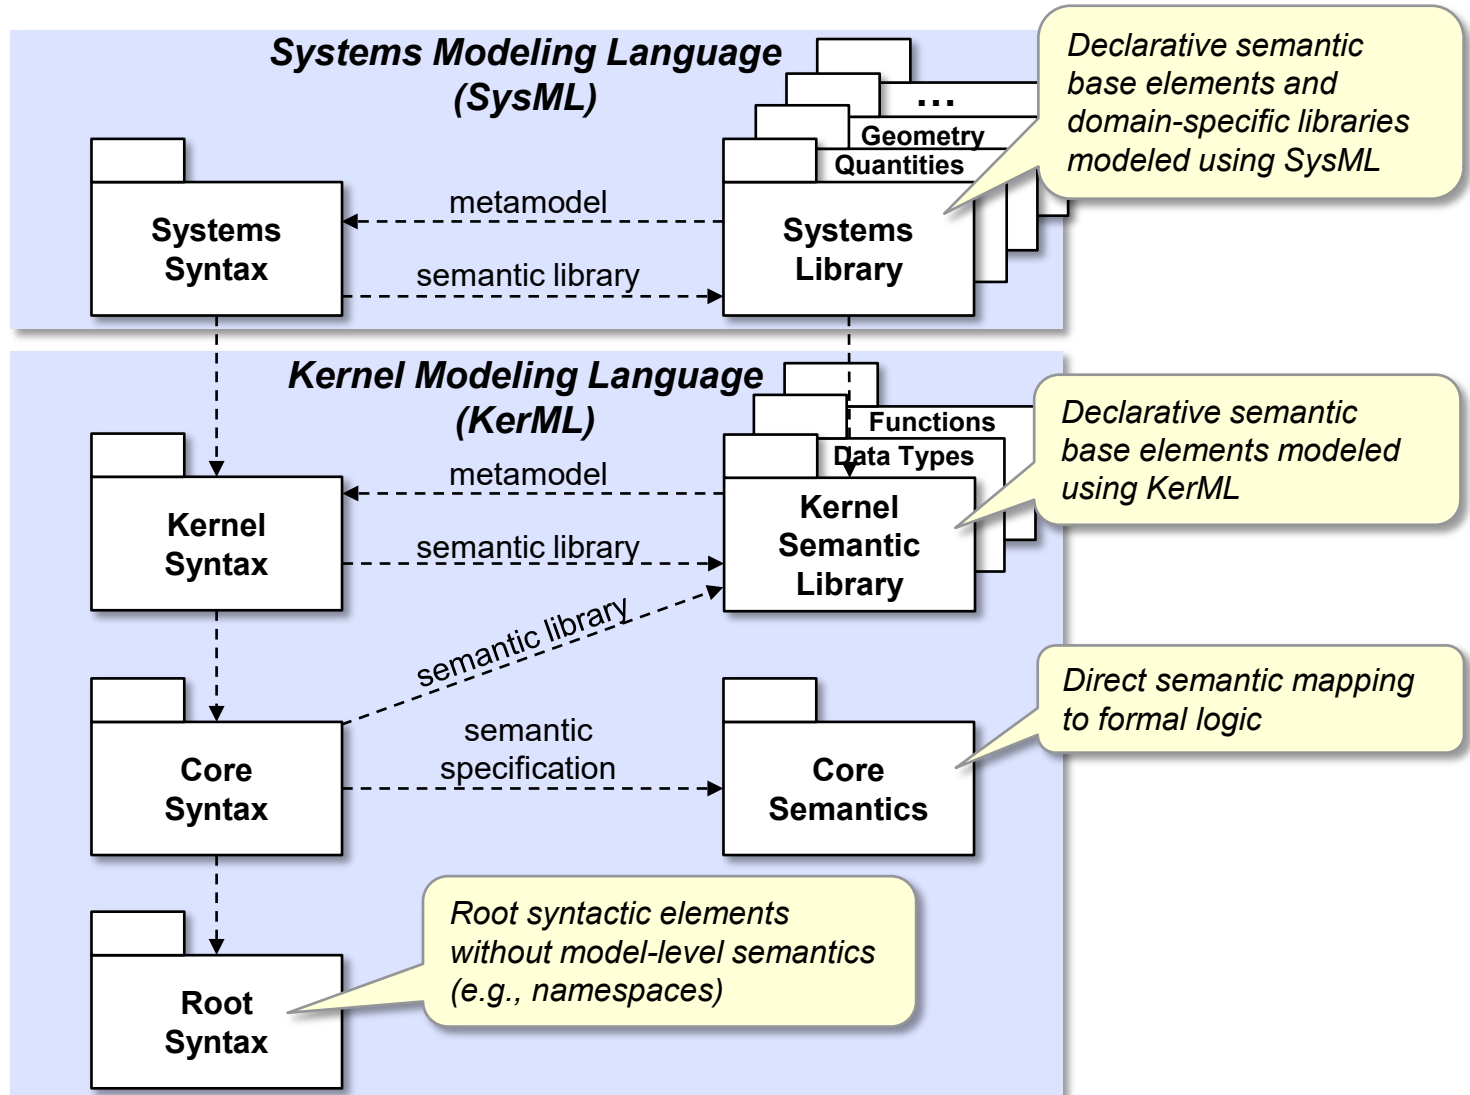

A broad team of end users, vendors,
academics, and government liaisons
Currently 200+ members from 80+ organizations

Developing submissions to both RFPs
Final submission: February 2023

SysML v2 Language Capabilities

Language Architecture

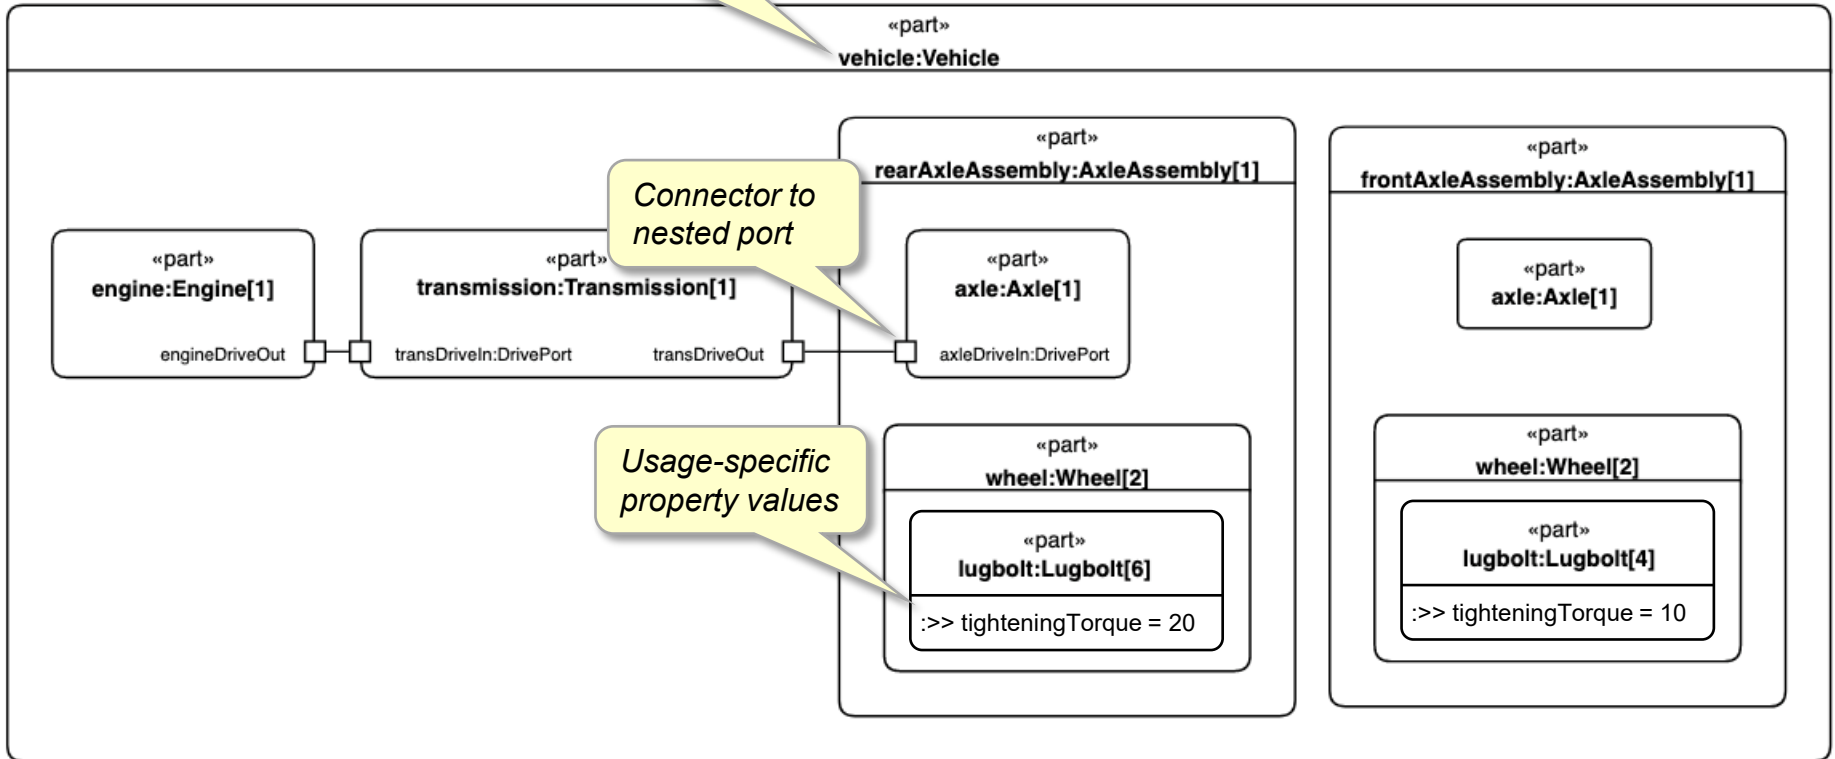

New Metamodel

SysML v2 language design isn't limited by being a UML profile

Usage-focused modeling

Connector to nested port

Usage-specific property values

Textual and Graphical Notation

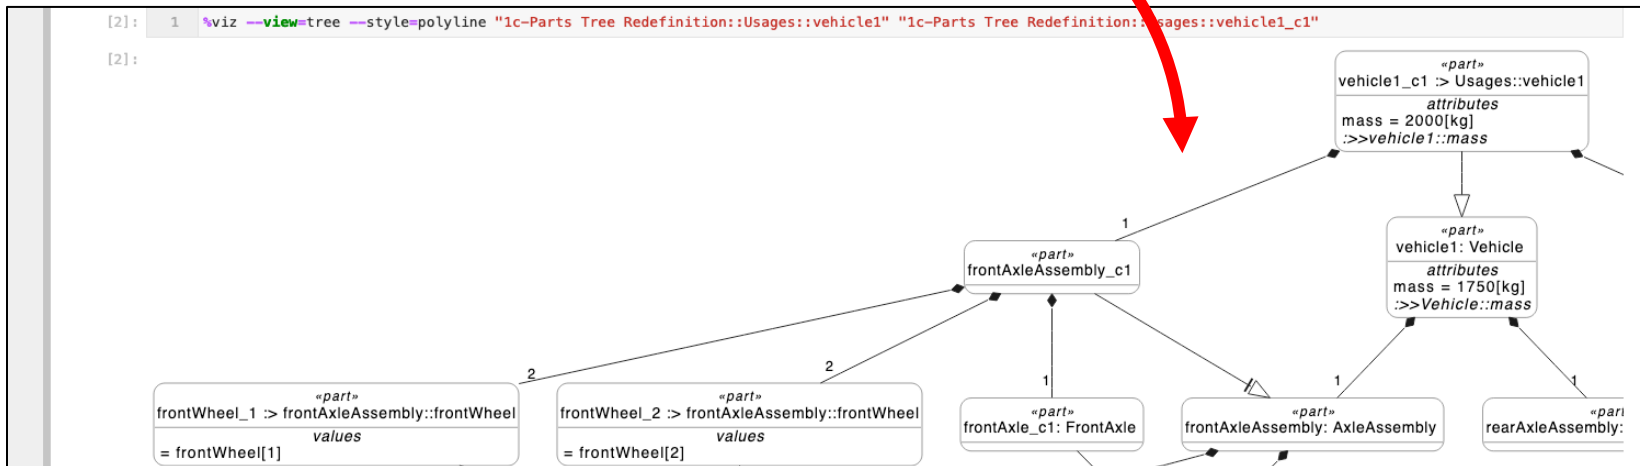

Allows integration with many existing text-based language technologies.

```

1c-Parts Tree Redefinition.iX
Code
SysML

21 part vehicle1: Vehicle {
22   attribute redefines mass = 1750[kg];
23
24   part frontAxleAssembly: AxleAssembly {
25     part frontAxle: Axle;
26     part frontWheel: Wheel[2] ordered;
27   }
28   part rearAxleAssembly: AxleAssembly {
29     part rearAxle: Axle;
30     part rearWheel: Wheel[2] ordered;
31   }
32 }
33
34 /**
35  * 'vehicle1_c1' is a specialization of 'vehicle1' (technically
36  * a subset). It inherits all the parts of 'vehicle1' and
37  * only needs to specify additional or redefined parts.
38  */
39 part vehicle1_c1 :> vehicle1 {
40   /**
41    * The mass is further redefined to give it a new attribute
42    * for 'vehicle1_c1'.
43    */
44   attribute mass redefines vehicle1::mass = 2000[kg];
45 }

```

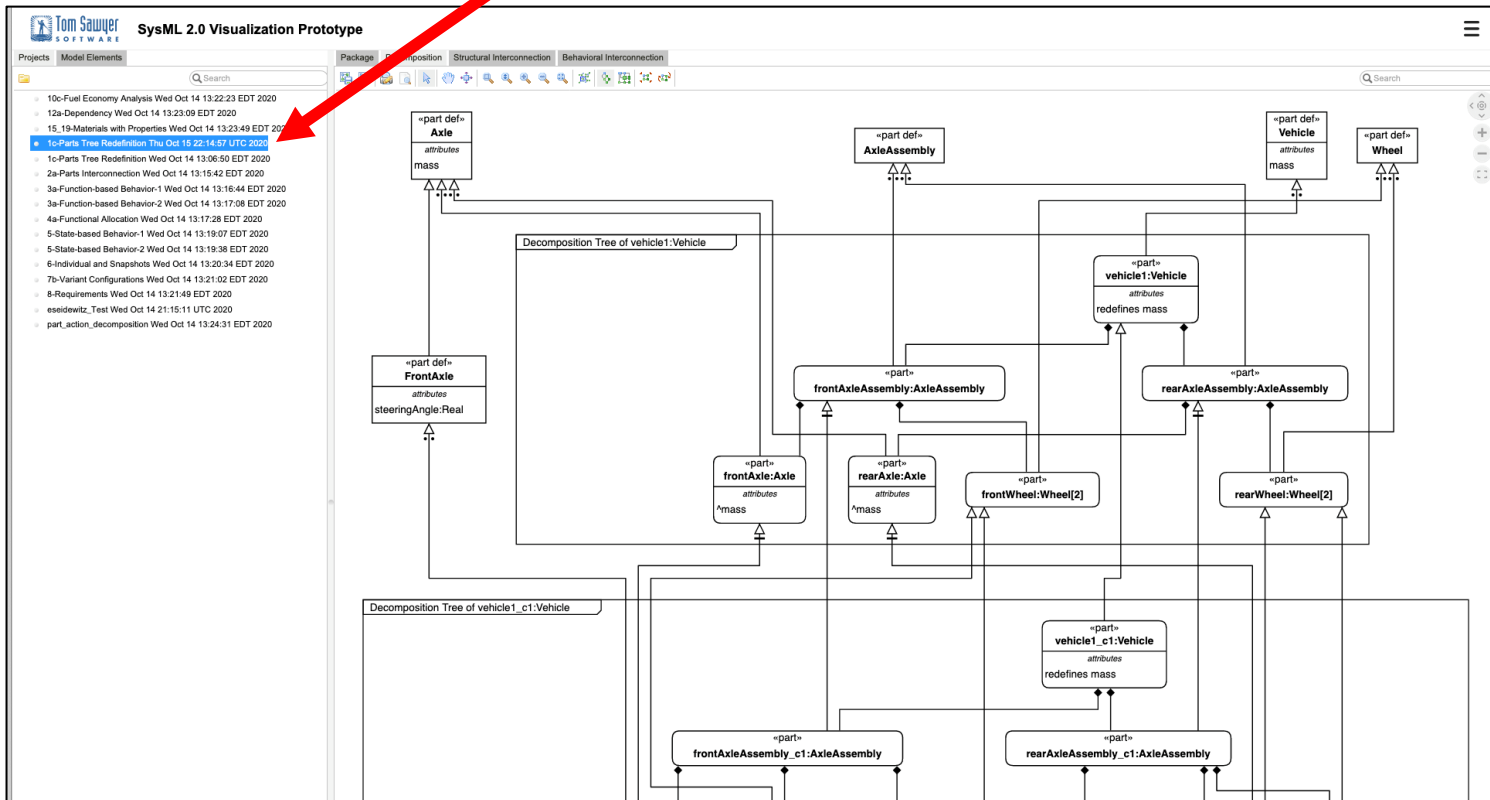

Standardized API

Allows SysML tooling to interoperate with other tools
